

## 10-Clutch Hub

Part No.

**28304-02**

GM Powerglide<sup>®</sup>

To ensure maximum clutch plate engagement with the hub splines, Sonnax 10-clutch hub **28304-02** is manufactured with a minimal chamfer at the indicated area.

When using non-Sonnax flanges, you must check the clearance between the chamfer on the hub and the sun gear flange to ensure there is adequate clearance. If more clearance is needed, machine a greater chamfer on the hub as necessary.
